**DETAILED ACTION**

***Response to Arguments***

1. Applicant's arguments with respect to claim 1 have been considered but are moot in view of the new ground(s) of rejection.

***Claim Rejections - 35 USC § 103***

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Orino US 5,627,669 (Orino) in view of Dilworth US 4116537 A (Dilworth).

Regarding claim 1, Orino disclosed (Figure 11)

An optical space transmitter comprising: a light source for emitting a light beam modulated according to a signal to be transmitted (1); an optical system for sending out the light beam emitted from said light source as transmission light beam with an angle of expansion (e.g., col./line: 5/52-65); Orino does not disclose a temperature detector for detecting the internal temperature of the device; and a control means for changing the angle of expansion of said transmission light beam as a function of the temperature detected by said temperature detector.

However Orino does disclose that temperature affects the position of the light beam and requires adjustment throughout the operation of the apparatus (e.g., col./line: 1/22-30). Dilworth disclosed (e.g., col./line: 2/62-67, 3/1-25) the ability to change

the angle of an optical member due to angular expansion. It would have been obvious to one of ordinary skill in the art at the time of invention to use a divergent angle adjustment means in the Orino transceiver apparatus for the benefit of stabilizing position changes in the transmitter and receiver throughout the environmental temperature range.

***Allowable Subject Matter***

4. Claim 2, 3, and 5-7 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
